SUMMARY

Supply chain and data analytics candidate pairing Lean Six Sigma process improvement with applied analytics in SQL, Python, Power BI, and Tableau across distribution, logistics, inventory, and forecasting; track record of quantified cost, efficiency, and loss-reduction outcomes.

EDUCATION

Northeastern University

Bachelor of Science in Business Administration

Concentration: Supply Chain; Minor: Data Science

Boston, MA

Expected May 2028

GPA: 3.43 / 4.00

- **Relevant Coursework:** Global Supply Chain Strategy; Sourcing, Procurement & Negotiation; Introduction to Databases; Mathematical Foundations of Artificial Intelligence
- **Leadership & Activities:** Senior Consultant, CASE – Northeastern Consulting Group; Research Analyst, Global Markets Association; Study Abroad Semester, University of Glasgow

TECHNICAL SKILLS

- **Languages & Databases:** Python, R, SQL
- **Analytics & Visualization:** Power BI, Tableau, Excel (advanced), Power Automate, Matplotlib, Seaborn, ggplot2
- **Supply Chain & Process:** Demand planning & forecasting, inventory analysis, procurement & sourcing, logistics, process mapping, root cause analysis (DMAIC), KPI development
- **Tools:** MS Visio, DocuSign, Figma, Canva, MS Office
- **Certifications:** Lean Six Sigma Yellow Belt (TJX), Intermediate Data Analytics (Google), Bloomberg Market Concepts, Leveraging AI for Business (Northeastern)
- **Awards:** National University of Singapore Programming Competition – 3rd Place; Finnovate Startups Competition – 4th Place
- **Interests:** Basketball, Lawn Tennis, Aviation, Music (Clarinet), Cycling

PROFESSIONAL EXPERIENCE

The TJX Companies, Inc.

Global Continuous Improvement Intern

Framingham, MA

Jan 2026 - Jun 2026

- Delivered process-improvement consulting on **20+ active Yellow and Green Belt projects** across **5 distribution/fulfillment centers** spanning TJ Maxx, Marshalls, HomeGoods, and Sierra, applying spaghetti diagrams, Pareto, and PICK chart analysis to eliminate waste across supply chain operations.
- Built a unified **shrink, damage, and appeasement dashboard** across **4 distribution centers**, replacing manual tracking with real-time visibility that surfaced recurring loss patterns in high-shrink categories (luggage, confectionery) and drove a **0.8% reduction in unaccounted losses**.
- Automated data collection and reporting in Viva Engage and built a centralized project tracker, eliminating **~1.5 hrs of manual weekly effort per associate** and improving team-wide project visibility by **30%**.
- Built **4+ SQL-backed Power BI dashboards** and Visio swim-lane process maps tracking daily operational metrics across multiple distribution centers; led cross-functional process documentation and a DocuSign rollout for EU operations with HR, IT, Logistics, and Loss Prevention.

MedTourEasy

Data Analyst Intern

Remote

Jul 2025 - Sep 2025

- Analyzed patient database of **300+ records** using SQL and R to create data visualizations and executive presentations, informing senior management expansion strategy for international medical tourism markets.
- Developed statistical models from patient data to generate insights for strategic decision-making for medical tourism expansion.
- Improved patient satisfaction scores by **13%** through feedback analysis, identifying gaps and recommending improvements.

Bhairav Exports Industry Pvt. Ltd.

Supply Chain Data Analyst Intern

Thane, India

Apr 2025 - Jun 2025

- Constructed statistical forecasting model using Python and time-series analysis to address inventory imbalances causing financial losses from raw material shortages to achieve **~7.5% cost cut within a quarter**.
- Pitched an automated KPI metrics workbook to the sales team, resulting in implementation of the workbook into processes.
- Assessed export shipment data across countries in West Africa including Nigeria, Kenya, Tanzania and Benin to optimize logistics, shipping schedules and consolidation strategies, achieving a decrease in freight costs by **3% per container shipped**.

PROJECT EXPERIENCE

MerchFlow : Modernizing Off-Price Procurement

Jan 2026 - Present

- Built a **10-table MySQL relational database** modeling TJX-style off-price procurement across **10 vendors, 16 SKUs, 7 merchandise categories, and 5 distribution centers**, spanning inbound shipments, DC inventory, and markdown events.
- Wrote **8 analytical queries** benchmarking vendor lead time against contracted terms, ranking buyer gross-margin performance, and tracking inbound pipeline visibility across distribution centers.
- Surfaced **\$144K in total PO value** across vendor relationships, identified a **680-unit inventory gap** in Men's Apparel, and flagged **30% average markdown depth** on Outerwear; insights directly applicable to TJX buyer scorecards and DC replenishment workflows.

TransOps : Digitizing Road Transport

Sep 2025 - Dec 2025

- Built a real-time operations dashboard with automated expense reconciliation and trip-level profitability analytics, cutting reconciliation time from **3-4 hrs to under 30 min per week** and enabling route-by-route margin analysis for fleet owners.
- Engineered AI-powered route optimization and return-load matching that cut empty backhaul miles by **~17%**, with driver dashboards tracking fuel efficiency, timeliness, and safety compliance.
